Copy Website Data

This is the process to copy any website using S3 Trac Web Copier.

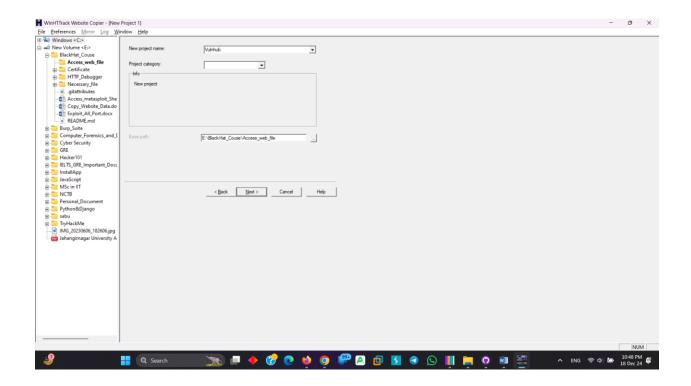

S3 trac allows you to download the client site component of a website including HTML CSS JavaScript Images Multimedia and many more assets.

Download and open HTTrack.

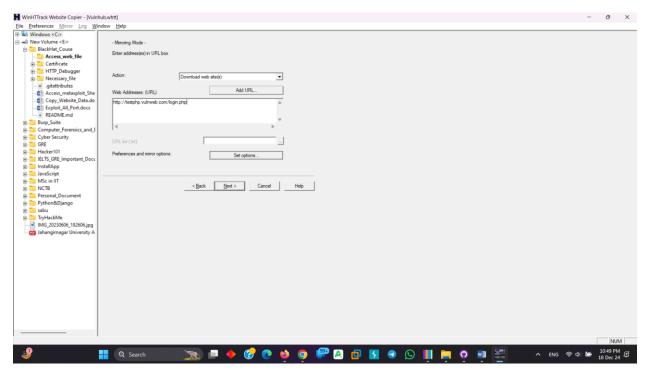

Here is the step by step procedure:

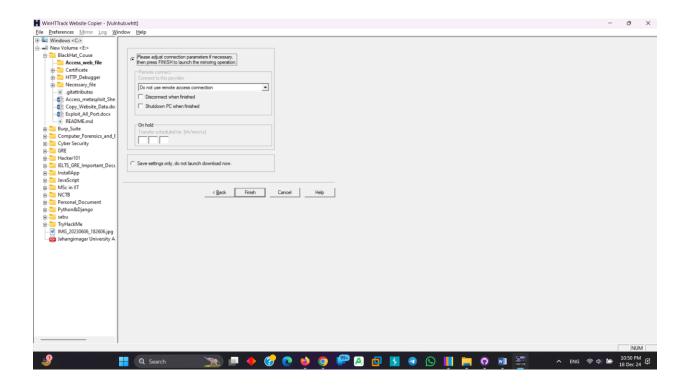

Write a project name and select the output directory:

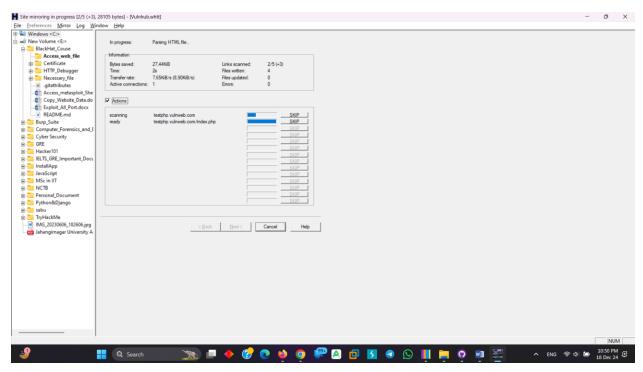

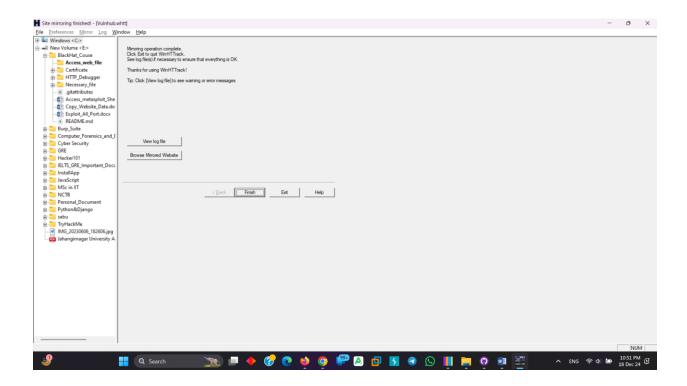

Copy any URL and paste:

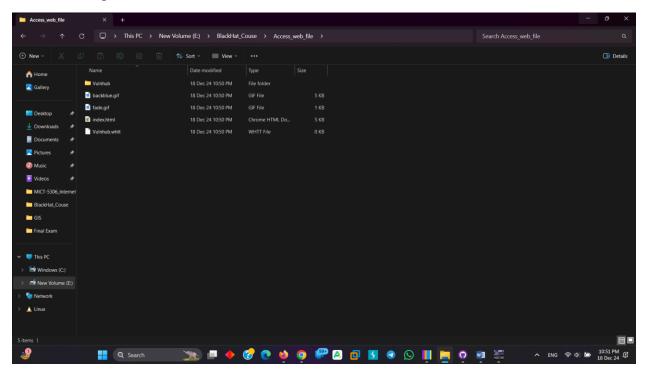

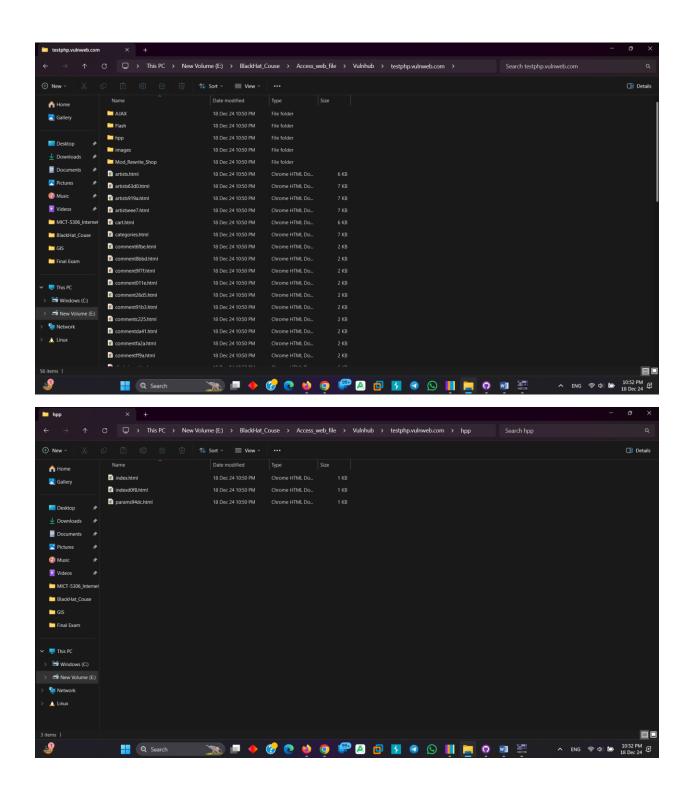

This will take some times for complete scanning:

After finish, open the file location:

See the location, its local file now.
